Arantia TV middleware

Interactive and IPTV Middleware

The server is in charge of the distribution of interactive services to the IPTV devices through a powerful and intuitive interface, fully customizable to meet each customer requirements.

By means of this web-based middleware, the final user will gain access to the configured services: IP television service with channel list that can be customized per user or group of users, electronic program guide, BYOD services (mirroring, casting), messages, general information (weather, sightseeing...), hotel promotional information (special offers, hotel events, hotel services...), check guest expenses, wake up alarm, etc. through the television.

Ref.83031801

Art.Nr	AMW-ATV3-SW50
EAN13	8424450204948

Står Ut För

- Based on web technology
- Powerful backend with a complete management tool that allows to configure all the system settings and options (rooms, players, services, customized main menu, etc.).
- Middleware frontend compatible with the most popular end user devices (TV's and STB's) deployed in Hospitality IPTV projects. It includes an application for iOS and Android smartphones and gives access to the interactive services that have been configured through the management tool.
