Protective Sleeve H30 Series

Waterproof neoprene and nylon sleeve for H30 series meters. The enveloping design increases meter protection and includes a lid that prevents the screen from getting scratched. The meter remains like new for longer.

The sleeve also includes a 4-point height-adjustable harness that makes it possible to use the meter with one or both hands. Thanks to the harness, the meter is hung without rotating, so it is unnecessary to have a support point, which is very useful in complex installations. The device remains stable and perpendicular to the body, without sacrificing proper direct viewing of the screen.
