Wi-Fi Analyzer 2.4/5 GHz option MOSAIQ6 meter

This option performs a comprehensive analysis of the entire Wi-Fi band (2.4 and 5 GHz), to find, identify and measure all available Wi-Fi networks. For this, MOSAIQ6 offers 4 different analysis functions:

- **Wi-Fi List:** shows a list of all detected networks and for each one identifies: SSID, BSSID, channel, frequency, encryption mode and power of the access point.
- **Wi-Fi measures:** for a specific network, shows the current power value of the access point and a graph of its variation during a selectable time interval.
- **Time graph:** offers a time graph with the history of power measurements of all detected Wi-Fi networks.
- **Channel map:** shows a graph with the channel distribution of the detected Wi-Fi networks.
